THE COMPANY

Misia has manufactured an extensive range of hoists for more than 25 years. Over 50.000 wire rope units have been sold worldwide and are operational in every sector of industry.

The XM series range consists of 7 sizes with capacities between 1000 Kg and 25000 Kg. The hoist units are available in different configurations: Low headroom monorail, standard headroom monorail, foot mounted (fixed or suspended), double rail "crab" units (supported or inverted). With these configurations, this standard range allows the XM series to meet any requirements or application: capacity, hook travel, travel and hoisting speed, load spectrum based on the FEM classification (FEM section IX). All MISIA hoists comply with the Machine Directive 98/37/EEC.

QUALITY AND CERTIFICATIONS

The commercial documentation, together with the technical instruction manuals for the installation, use and maintenance of electric rope hoists, which accompany the sale of every machine, have been drawn up in accordance with unified standards UNI EN 292 – parts 1 and 2. The XM series electric rope hoists are produced in accordance with the Machine Directive 89/392/EEC, with the Italian law DPR 459 dated July 24th, 1996 and the Directive 98/37/EEC.

The components of the hoist comply with the requirements of the Directive and CE Mark confirms the conformity of the whole equipment.

MISIA produces and sells the electric rope hoists under a registered quality control system approved to UNI EN ISO 9002, with issue from the Certification Company BVQI of following international certificates: SINCERT - ITALY.

CE MARK

The leadership and reliability of MISIA as an electric rope hoist manufacturer are confirmed and guaranteed by our taking on the responsibilities resulting from the CE mark.

Before being made available for sale and CE marked, each hoist has all its parts and/or components thoroughly inspected and tested. In addition to the CE declaration of conformity, all the machines have an internal test certificate and are guaranteed for 2 YEARS FROM DELIVERY.

MISIA WIRE ROPE HOISTS XM SERIES

THE RANGE

Manufacture of the **standard** version of XM series wire rope hoists accounts for over 90% of the company's production.

This confirms the flexibility of the MISIA product in adapting to many industrial lifting applications without subjecting the user to a bespoke product.

The production of the new XM series includes 7 construction sizes for capacities between 1000 Kg and 25000 Kg, 2 or 4 rope falls, lifting speeds ranging from 2,5 m/min to 12 m/min, feet mountings allowing "supported" or "suspended" fixing (for foot mounted or double rail "crab" units).

A wide range of travelling trolleys are also available in either double or monorail version, with the option of low or standard headroom.

MISIA WIRE ROPE HOISTS XM SERIES

Standard configurations

TYPE 5
Foot mounted hoist
without trolley.

TYPE 3
Hoist fitted with
standard headroom
trolley.

The XM series of Misa wire rope hoist are available in the followings configurations:

S2 version (2 rope falls)
Lifting capacity
from 1000 Kg to 12500 Kg
either supported or suspended.

S4 version (4 rope falls)
Lifting capacity
from 2000 Kg to 25000 Kg
either supported or suspended.

TYPE 83
Low headroom
monorail hoist.

TYPE 53
Double rail "crab" unit.

MISIA WIRE ROPE HOISTS XM SERIES Components

Hoist gearbox

The 2 or 3 stage planetary gearbox reduces the speed of the electric motor to the required rpm of the drum.

Each individual planetary gear is manufactured using heat-treated high quality steel.

Self braking cylindrical lifting motor

The three-phase asynchronous electric motor with cylindrical rotor and disc brake is available in both single or dual speed option.

The single polarity motor allows inverter control to be fitted offering further speed control to suit the application requirements.

Rope guide

The rope guide consists of two parts: the guide ring and pressure spring.

The pressure spring ensures that the rope sits correctly into the drum groove whilst the guide ring always maintains the rope in the correct position preventing the rope from coming off the drum groove.

The guide is a robust steel design fitted with high quality bearings. Movement of the guide across the drum activates the up/down limit switch.

Load limiter

All "XM" series hoists with 2 and 4 rope falls are equipped with a load limiter with 2 reaction thresholds. The load limiter consists of an electric-mechanical system with pre-set springs acting on two microswitches located in the auxiliary circuit. These microswitches stop all movements, exception made for the lowering of the load. The first threshold activates a WARNING, the 2nd stops the function.

Low headroom trolleys

The low headroom trolley consists of two electric trolley motors fitted onto planetary gearboxes. The trolley is of a live axel design with the gearboxes fitting directly onto the drive shaft of the wheels removing the need of external gears.

Standard headroom trolleys

The standard headroom monorail design enables the hoist to operate directly under and parallel with the crane or runway beam. The hoist is suspended via drive trolley.

MISIA WIRE ROPE HOISTS

XM SERIES

Performance

Selection of the FEM group is determined by two parameters:
a) running time;
b) duty.

Hoist seldom lifting the maximum load and mostly light loads.

Hoist lifting maximum-medium and light loads at an even ratio.

Hoists frequently lifting the maximum load and normally medium loads.

Hoists regularly lifting loads near the maximum capacity.

Comparison FEM-ISO Groups

Duty class	Running time "T"	
L1 - Light duty	6300	12500
L2 - Medium duty	3200	6300
L3 - Heavy duty	1600	3200
L4 - Very heavy duty	800	1600

MISIA WIRE ROPE HOISTS

XM SERIES

Characteristics

The design of Misia wire rope hoist units is complemented by the use of quality components. All gearboxes are of planetary gear type, 2 or 3 stages and lubricated for life. Motors can be supplied either with cylindrical type with disc brake or tapered rotor conical motors, depending on application or customer preference. The rope guide is manufactured using high quality materials and bearings. Ropes are of high endurance class and galvanized. Monorail low headroom trolleys utilize our twin drive live axel design with planetary geared motors and gearboxes fitted directly onto the drive shaft of the trolley wheels eliminating the need of external gears.

The lifting and travel speeds refer to a frequency of 50Hz.

Hoists travel speed (m/min.)													
Type	1 speed							2 speed					
3 - monorail standard headroom	18							18/6					
83 - monorail low headroom	20-10							20/5					
53 - double rail	20	16	12	10	-	-	-	20/6,5	-	16/5,3	-	12/4	10/3,3

For double beam trolley with 25.000 kg capacity, the max. available speed is 16 or 16/5,3 m/min.

MISIA WIRE ROPE HOISTS XM SERIES

Lifting and trolley motors

PERFORMANCES AND CHARACTERISTICS

Standard voltages:

- 230 V - 400 V a 50 Hz
- For single pole motors, Δ/Y or Y/Δ changeover is always possible.
- For twine pole motors specify the exact supply voltage.
- The drawings shown in the charts refer to 400V 50Hz.

Standard protection class: Motors IP54-
Brake IP23.

Special Voltages:

On demand, special voltages are available.

Note:

- 1) For beam sizes wider than those shown, the "C" dimension (encumbrance of the hook) increases of 12 mm every 10 mm of wider beam size.
- 2) The dimension "L" shown is valid for beam size 300 mm; with different beam size it increases or decreases of half of the difference of the beam size.
- 3) The values shown are for maximum beam size 300 mm.

* "L" dimensions of lifting motors and hook blocks, see pages 20-21.

- Static values of reactions, see pages 33-35.

MINIMUM NECESSARY WIDTH OF THE FLAT SIDE OF THE BEAM TO ALLOW THE WHEELS RUN

Wheels diameter	Min. width

**MISIA WIRE
HOIST
Series XM**

SPECIAL APPLICATIONS AVAILABLE

Lifting heights exceeding those of the standard range
S2 two rope falls (2/1)

Hoist units with a requirement for extra lifting height can be manufactured in foot mounted, standard monorail, low headroom monorail or double beam trolley versions.
Capacities ranging from 1000 kg up to 4000 kg with a lifting height between 33-40 metres.
Capacities ranging from 5000 kg up to 6300 kg with a lifting height between 32-48 metres.

The following configurations are also available:

Fig. 43

Articulated standard headroom monorail hoist units to negotiate radius.
Lifting capacity up to 4000 kg (minimum radius 1500 mm)
Lifting capacity up to 10000 kg (minimum radius 2500 mm)

Fig. 83B

Single rope fall (S1) standard headroom monorail hoist units.
Lifting capacities ranging from 800 kg up to 2500 kg with a lifting height between 41 up to 80 metres.
Lifting capacities ranging from 3200 kg up to 6300 kg with a lifting height between 49 up to 96 metres.
N.B. For the fig. 83B configuration it is necessary to supply a special current reading overload limiter in the electric panel.

SPECIAL HOIST WITH SINGLE OUTLET FROM THE DRUM

SINGLE HOIST WITH 6-8 ROPE FALLS:

With overload limiter
type OL

Hoist XM	Motor	Capacity	N° of rope falls

963	NSR8	50	8/1

SR6

Hook DIN 15402
Upon request DIN 15401

SR8

Hook DIN 15402
Upon request DIN 15401

SR6-SR8

Overload limiter
type "OL"

TWIN HOISTS WITH 4+4 ROPE FALLS

With pin load cell

Hoist XM	Motor	Capacity	N° of rope falls
	N	t	
2x740	NSR4	32	4/1+4/1
2x950	NSR4	40	4/1+4/1
2x963	NSR4	50	4/1+4/1

Hook DIN 15402
Upon request DIN 15401

HOISTS XM Series

SPECIAL APPLICATIONS AVAILABLE Hoists with double outlet from the drum

WITH SINGLE-SIDED DOUBLE ROPE OUTPUT

TYPE D1 DOUBLE ROPE OUTPUT WITH 2/1 ROPE FALLS

Capacities
from 0,4+0,4 t
to 3,2+3,2 t

TYPE D2 DOUBLE ROPE OUTPUT WITH 4/2 ROPE FALLS

Capacities
from 1 t
to 12,5 t

WITH OPPOSITE DOUBLE ROPE OUTPUT

TYPE DC1 OPPOSITE DOUBLE ROPE OUTPUT WITH 2/1+1 ROPE FALLS

Capacities
from 0,4+0,4 t
to 3,2+3,2 t

TYPE DC2 OPPOSITE DOUBLE ROPE OUTPUT WITH 2/2+2 ROPE FALLS

Capacities
from 0,8+0,8 t
to 6,3+6,3 t
